

3S Media

3S Media is a modern media company offering quality information to business communities through magazines and digital media. Founded in 1960, the company has more than 50 years' experience in the business. It produces industry and business publications, newsletters, and websites.

There are currently eight regular print titles, as well as special annual publications, in the print stable. Many of these are produced in partnership with professional institutes, while annual publications are produced in partnership with large private and public sector entities. A number of the company's titles have been recognised for publishing and journalism excellence.

3S Media has four industry websites, with weekly newsletters, offering breaking news, in-depth analysis, upcoming events, and the latest industry developments. With a strong social media presence, 3S Media is entrenched in, and engaged with, its professional communities.

Amanz' abantu Services

Amanz' abantu Services (Pty) Ltd specialises in the development and delivery of infrastructure projects for water supply, sanitation and the development of human settlements. As most of the projects undertaken are targeting rural and developing communities, Amanz' abantu has in-house institutional and community development specialists to ensure smooth project facilitation.

Impilo Yabantu Services (Pty) Ltd, is a wholly owned subsidiary of Amanz' abantu, and specialises in the provision of operations and maintenance services for water supply and sanitation schemes and services. Impilo Yabantu has adopted a social franchising business model to partner, train and support small enterprises to undertake the service provision functions.

The company has fully functional offices servicing the Eastern Cape and KwaZulu-Natal provinces of South Africa, with its head office located in Buffalo City (East London).

Amanzi Starway (Pty) Ltd

Amanzi Starway (Pty) Ltd manufactures stainless- and carbon-steel-reinforced HDPE pipes using 100% virgin HDPE materials under license agreement with the patent holder of South Africa Patent No. 2006/2154.

It is a proud member of SAPPMA and quality-assurance approved by SAPPMA auditors. Is also has a South Africa National Standard: SANS 674-2015.

Amanzi Starway pipes are manufactured using innovative, patented technology to achieve high ring stiffness at relative light weight by combining the strength of the steels and the excellent anti-corrosive, anti-abrasion hydraulics characteristics of HDPE into a composite materials pipe.

Amanzi Starway pipes have been successfully installed over 160 projects throughout South Africa using pipe sizes from DN 200 to DN 2200. Amanzi Starway is SABS approved.

Department of Public Works

The Department of Public Works leads and coordinates the Expanded Public Works Programme (EPWP), which is a nationwide programme covering all spheres of government and state-owned enterprises. The EPWP was introduced in 2003 as one of government's major public employment programmes under the Anti-Poverty Strategy. It aims to draw significant numbers of unemployed people into productive work, accompanied by training. The programme involves re-orientating line function budgets and conditional grants for government expenditure to create work opportunities.

For the EPWP to be effective and achieve the vision set out in the NDP, the EPWP has a clear and limited mandate: "To provide work opportunities and income support to poor and unemployed people through the labour-intensive delivery of public and community assets and services, thereby contributing to development."

Our African City

Our African City's philosophy is to view urban transformation through an African lens, which says: how do we use environmentally sustainable economic growth as a means of achieving particular social goals? This means that marginalised communities are included in urban development planning for social spaces, economic development and in environmental management and protection.

The Our African City dialogue seeks to:

- Be a dialogue that is initiated, developed and owned by Africa with the intention of bridging collaboration across government, business and society about how best to manage urbanisation.
- Create a collaborative space by breaking down silos and respectfully sharing ideas and learning from one another.
- Recognise that solving the challenges of urban development requires methods and approaches grounded in innovation and, through innovation, we can leapfrog the developmental path taken by developed countries.
- Recognise the nuances of the African urban economy, integrating rather than maligning characteristics like the informal sector.
- Focus on putting the needs of people first, by understanding what our citizens want to see and experience in their cities and exploring ways to satisfy those needs in sustainable, competitive, liveable cities that are environmentally responsible.
- Enable an ongoing dialogue through which an evolving base of knowledge, new ideas and new learning is based on the reality of what our cities are and the vision we must all partner on to co-create.

Rand Water

RAND WATER

Celebrating 110 years of proving quality water.

Rand Water as a state owned organization is bound by Water Services Act 1997 to provide water services which is described as water and sanitation services to other water institutions (WSI) and authorities within its service area. Other activities of Rand Water according to the Water Services Act may include; providing management services, training and other support services to water services institutions, in order to promote co-operation in the provision of water services; supply untreated or non-potable water to end users who do not use water for household purposes; providing catchment management services to or on behalf of responsible authorities and performing water conservation functions.

The primary objective of Rand Water's Bulk Sanitation Department is to extend sanitation services to water service authorities and institutions within and beyond Rand Water areas of supply. Rand Water's partnership with municipalities and Department of Water Affairs' main focus is to address the sanitation challenges such that the environmental assets and natural resources are protected for a long and healthy life for all South Africans. Bulk Sanitation Mission To deliver on Rand water's mandate: the provision of bulk sanitation services is to ensure that water and sanitation contributes towards addressing poverty and scarce water resources.

The services provided by Bulk Sanitation include:

- Assessment of wastewater treatment plants and providing site specific recommendations to municipalities to ensure effluent compliance to Department of Water Affairs' (DWA) Green Drop Certification.
- Provision of management, operation and maintenance of the wastewater treatment works.

- Capacity building and training of process controllers, industrial effluent monitoring programme, refurbishment.
- Process upgrade of water and wastewater treatment works, management of the pump stations.
- Refurbishment Acid Mine Drainage (AMD) plants and operations and maintenance of the AMD.

Bulk Sanitation' Mandate

- Responsive to the overall national water mandate.
- Responsive to the national bulk sanitation challenges.
- Responsive also to the African sanitation plan declared in 2008.
- Complete the cycle of water services as stipulated by the Water Services act.
- To meet the needs of the people in terms of water provision and to promote sustainable sanitation services.

Challenges and risks facing the Bulk Sanitation

- Ageing infrastructure
- Current design & capacity of the wastewater treatment plants
- Changing institutional arrangements
- Industrial pollution

South African Road Federation (SARF) and Southern African Bitumen Association (SABITA)

The South African Road Federation (SARF) is an organisation dedicated to the promotion of the road industry in South Africa through the dissemination of information, the promotion of sound policies, and the provision of education and training. SARF is defined by South Africa's roads and road sector. It is a single body, which provides a representative forum for the provision and management of roads and the road sector. The federation provides contact between South Africa's road industry sectors and facilitates the distribution of expertise throughout the diverse disciplines, which have impact and application on the industry. SARF is linked to the International Road Federation (IRF). By liaison with this organisation's Programme Centres in Geneva and Washington, the latest developments in road technology, policy, and management worldwide are made available to local industry.

SARF has been accredited with a Level 1 Contributor BBBEE QSE status by Audit EX (SA), expiry date 2017/07/17.

The Southern African Bitumen Association (Sabita) founded in 1979 is a non-profit organisation sponsored by its members to serve all stakeholders through technical support, services and education. Our mandate is to promote the interest of our members within the context of the government's social, economic, and infrastructural development strategies and we do this by:

- Promoting global standards of asphalt technology
- Fostering an informed industry through structured skills training programme & technical publications
- Implementing a culture of sustainability to conserve resources and to underpin infrastructure investment into the future
- Maintaining contact with all stakeholders to promote the social and economic benefits of a good road network
- Promoting the health and occupational safety of workers

SASTT

The Southern African Society for Trenchless Technology promotes the use of trenchless methods for the installation, rehabilitation, and maintenance of underground services with minimal surface and environmental disruption. Trenchless technology (TT) is technology for the servicing, rehabilitation, and replacement of existing, and the construction of new, public utilities and other services underground, without the digging of trenches, including the development of all kinds of underground condition-assessment and mapping techniques, tunnelling devices, and specialist machinery, materials, and equipment. Members of the society include contractors, service authorities, consulting engineers, and suppliers.

Tosas (Pty) Ltd

Tosas was established in 1972 as a joint venture/partnership between Sasol and Total, both known for being large fuel suppliers and with international footprints. The business was born as a result of the jointly owned shareholding in the Natref refinery and for them to own a value-add binder company. Tosas would not only be a retail outlet for bitumen binders but also a profit centre through the modification and further processing of penetration-grade bitumens.

Sasol became the 100% shareholder in 2008 and then again sold its shareholding of the entire Tosas Holdings to the Raubex Group of Companies in April 2013, through a divestment process involving the Competition Commissions of South Africa, Botswana and Namibia.

Today, the company operates from seven locations across Southern Africa.

Umgeni Water

Umgeni Water is a public entity, established in 1974. The organisation operates in accordance with the Water Services Act (No. 108 of 1997) and the Public Finance Management Act (No. 1 of 1999), among others, and is categorised as a National Government Business Enterprise – reporting directly to the Department of Water and Sanitation.

Umgeni Water's primary activity, as pronounced in section 29 of the Water Services Act, is to provide water services (water supply and sanitation services) to other water services institutions in its service area. In addition, section 30 of the Water Services Act enables Umgeni Water to undertake other activities, provided these do not impact negatively on the organisation's ability to perform its primary activity.
